"Functional association of U2 snRNP with the ATP-independent spliceosomal complex E.";

Mol. Cell 5:779-787(2000).

-!- FUNCTION: SUBUNIT OF THE SPLICING FACTOR SF3B REQUIRED FOR 'A'

COMPLEX ASSEMBLY FORMED BY THE STABLE BINDING OF U2 SNRNP TO TH BRANCHPOINT SEQUENCE (BPS) IN PRE-MRNA. SEQUENCE INDEPENDENT BINDING OF SF3A/SF3B COMPLEX UPSTREAM OF THE BRANCH SITE IS ESSENTIAL, IT MAY ANCHOR U2 SNRNP TO THE PRE-MRNA. MAY ALSO BE INVOLVED IN THE ASSEMBLY OF THE 'E' COMPLEX. BELONGS ALSO TO THE MINOR U12-DEPENDENT SPLICEOSOME, WHICH IS INVOLVED IN THE SEMBLY OF THE 'E' COMPLEX. BELONGS ALSO TO THE MINOR U12-DEPENDENT SPLICEOSOME, WHICH IS INVOLVED IN THE SPLICEOSOME.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CONFLICT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DEVELOPMENTAL STAGE: First expressed in L1 larvae, and thereafter. DOMAIN: The large coiled coil domains are composed of 6 nearly exact repeats of 903 residues. The last repeat is partial. These repeats are conserved in Hawai (CB4856), Australia (AB4) and Germany (RC301) strains. The length of the repeat may be maintained because of a selective advantage to keep the protein large and allow a single molecule to extent more than 0,5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: Type IV membrane protein (Poter largest part of the protein is cytoplasmic, while it part is associated either with the nuclear envelope, the outer nuclear membrane, or with mitochondrial membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in the cytoplasm, creating a bridge across the nuc-
between the cytoskeleton and the nucleus.
SUBUNIT: Interacts with F-actin via its N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Plays a central role in nuclear and mitochondrial anchoring. Probably connects nuclei to the cytoskeleton by interacting with unc-84 at the nuclear envelope and with F-
                                                                                                                                                                                                                                                                                                                                                                                                                                                         targeting.
SIMILARITY: Belongs to the Nesprin family.
